

For Law Firms

"We utilize SOTEC's software to identify and isolate faults across our critical networks, systems and applications. The ability to access electronic legal files, case histories and secure client data on a 24/7 basis, enables our attorneys to provide time-sensitive counsel to our clients."

*Ron Wexler,
IT Manager, Hartman, Simons,
Spielman and Wood, LLP*

- Would you like to pinpoint and isolate slow service issues associated with accessing in-house legal programs such as Legal Files?
- Do your attorneys demand 24x7 access to client cases?
- Do your users demand high performance and availability of your LAN/WAN infrastructure across multiple offices?
- Does your firm lose money if paralegals are unable to retrieve, index and access information enabling them to act quickly on client matters?

We can help. Law firms across the country are leveraging our powerful, Web-based IT management software to maximize IT uptime and improve the performance and security of critical networks, systems and applications.

The Industry's Simplest IT Management Solution

With SOTEC software, you can proactively monitor network devices, critical servers and vital applications across a variety of departments and facilities - all from a single Web-based Dashboard. And, SOTEC handles maintenance, patches and administration of all your IT management software. SOTEC software installs on an appliance in a single day and requires minimal time and effort on the part of your IT staff.

Network, system and application reports include:

- Faults
- Assets
- Performance
- Security intrusion monitoring & vulnerability scanning
- Patch assessment & remediation
- Latency
- Availability
- CPU, memory & disk utilization
- Much more

Industry-Proven Technology

Hartman, Simons, Spielman and Wood, LLP; Fish & Richardson, P.C; Duane Morris, LLP and Affiliates and Hale and Dorr, LLP are just a few law firms utilizing SOTEC's IT management and security software to accomplish the following goals:

- Automate the identification, prioritization and mitigation of Windows patch vulnerabilities
- Improve response time for attorneys and paralegals when accessing document and case management systems, relational databases, extranets, client records, email and other critical resources
- Quickly identify and isolate contributors to "slow service" - network, system or application
- Bridge the gap between 24x7 users and 8am-6pm IT staff
- Access proactive network, system and application data via a single Web Dashboard vs. multiple tools and UIs
